/note="vector: pBaCIndigo; Site_1: ECORI; Rice is the most important food crop in the world. Half of the world population, especially those inhabiting highly populated areas of the humid tropics and subtropics, rely on rice as their primary source of carbohydrate.
/monocotyledonous rice is a diploid plant (2n=24) with a haploid genome equivalent of 431 Mbp (Arumganathan and Earle, 1991). The relatively small genome of rice, three times larger than that of Arabidopsis, makes it suitable for genomic studies. In order to facilitate positional cloning, physical mapping and genome sequencing of rice, we have constructed a BAC library from oryza sativa. Nipponbare variety using EcorI as the cloning enzyme. The equivalents: The deep coverage allows the isolation a particular sequence with a probability of 99.9 %. Three high density filters, each containing 18,432 clones (doubly spotted), represent the Whole library for colony screening and can be requested from the Clemson University BAC/EST Resource Center (www.genome.clemson.edu)."

/note="vector: pBACIndigo; Site_l: ECORI; Rice is the most important food crop in the world highly populated areas of the humid tropics and subtropics, rely on rice as their primary source of carbohydrate.
Monocotyledonous rice is a diploid plant (2n=24) with a haploid genome equivalent of 431 Mbp (Arumuganathan and Barle, 1991). The relatively small genome of rice, three times larger than that of Arabidopsis, makes it suitable for genomic studies. In order to facilitate positional, we have constructed a BAC library from Oryza sativa, Nipponbare variety using EcoRI as the cloning enzyme. The deep coverage allows the isolation a particular sequence with a probability of 99.9 %. Three high density filters, each containing 18,432 clones than particular sequence with a probability of 99.9 %. Three high density filters, each containing 18,432 clones (doubly spotted), represent the whole library for colony screening and can be requested from the Clemson University BAC/EST Resource Center (www.genome.clemson.edu)."

### ALIGNMENTS

Composes. Comportsing lymphoid surface membrane proteins - which may promibit cytolytic activity and differentiation of CTLS.

Frample: Page 12; 29pp; English.

Example: Page 12; 29pp; English.

R95413, and R95413-R9541 represent palindromes and fragments of chuman-leucocyte-associated antigens. This sequences can be used to isolate the protein p74 from a T-cell activation in mammalian T-cells, and is also immunologically cross reactive with the heat shock protein HSc70.

CC protein associated with T-cell activation in mammalian T-cells, and is also immunologically cross reactive with the heat shock protein HSc70.

CC protein associated with T-cell activation in mammalian T-cells, and is also immunologically cross reactive with the heat shock protein HSc70.

CC protein associated with T-cell activation in mammalian T-cells and is also immunologically cross reactive with the heat shock protein HSc70.

CC plum containing a covalently bound HLA-B2702 palindromic peptide.

CC column containing a covalently bound HLA-B2702 palindromic peptide.

CC column containing a covalently bound HLA-B2702 palindromic peptide.

CC compounds can be screened for their effect on the cytolysis. Candidate compounds them with the extracellular portion of p74 and determining the amount of binding between the candidate compound and p74.

Modulation of CTL activity can be inhibited in a cellular composition mix the extracellular portion of p74, in an amount sufficient to compete with p74 for the binding of the p74 ligand. 12-NOV-1996 (first entry)
HIA-B3702 84-79-84 palindrome.
HIA-B3702 84-79-84 palindrome.
HIA-B774: plyal-helix; human-leucocyte-associated antigen; inhibitor;
HIA- p74: alphal-helix; membrane protein; mammal: heat shock protein; Hsc70; APC;
B cell; calcium influx; cytotoxic T lymphocyte; CTL; differentiation;
cytolysis; antigen presenting cell. 10-NOV-1993; US-150493. (STRD) UNIV LELAND STANFORD JUNIOR. Clayberger C, Krensky AM; WPI; 95-194027,725. ¥ R95429 standard; peptide; 12 .0-NOV-1994; U12985.

New immunomodulating dimer peptide(s) - based on a Class I HIA-B

Replace Wajs78-98 and Wajs778-9 were assayed for their immunomodulating activity. Including the N-terminal acylated and/or creminal and/adted or esterified forms of up to 60 anino acids, where care the peptide-type compound comprises the formula; A-B, where A, B = creminal amidated or esterified forms of up to 60 anino acids, where the peptide-type compound comprises the formula; A-B, where A, B = cc * terminal amidated comprises the formula; A-B, where A, B = cc * terminal amidated comprises the formula; A-B, where A, B = cc * transplant amino acid; aa82 = R or E, aa89 = G or R; and as represents amino acid; aa99-84) or (aa84-79) (Laa77-76R); aa76 = E or V; aa77 = C * small amino acid; aa82 = R or E, aa83 = G or R; and as represents amino acid sequences related to a Class I HLA-B alphal domain (positions or small amino acid sequences related to a Class I HLA-B alphal domain (positions or undestrably attacking cells in a host or In Vitro. They can also be used to inhibit the proliferation of relis in cresponse to anti-CD3. The peptides or proteins of interest to activate CTLs. They can also inhibit the proliferation of relis in resed in combination with antigenic peptides or proteins of interest consorse to anti-CD3. The peptide can be used for preventing rejection of remained arthritis and lupus erthemetosis. The products can also be conneced or remained arthritis and lupus erthemetosis. The products can also be conneced or co
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New immunomodulating dimer peptide(s) - based on a Class I HLA-B alpha-1 domain, used for preventing rejection of transplants or treating autoimmune diseases.
Claim 17: Page 35: 41pp; English.
This sequence represents a specifically claimed immunomodulating dimer peptide of the invention. A peptide-type compound or variant is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
19-JUN-1998 (first entry)
Peptide B2702.84-79/79-84 tested for immunomodulating activity.
Immunomodulating dimer; immunosuppressant drug; CTL activation;
transplantation; autoimmune disease; Class I HLA-B alpha-1 domain;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    19-JUN-1998 (first entry)
Immunomodulating dimer peptide #3.
Immunomodulating dimer: immunosuppressant drug; CTL activation;
transplantation; autoimmune disease; Class I HLA-B alpha-1 domain;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ;

claimed which has immunomodulating activity, including the N-terminal acylated and/or C-terminal amidated or esterified forms of up to 60 amino acids, where the peptide-type compound comprises the formula; A-B, where A, B = (R aa76-77L) (aa79-84) or (aa84-79) (Laa77-76R); aa76 = E or V; aa77 = D, S or N; aa79 = R or G; aa80 = I or N; aa81, aa84 = a rycresents amino acid; aa82 = R or L; aa83 = G or R; and aa represents amino acid; The sequence in the brackets may optionally be absent or truncated at any peptide type bond within the brackets. The compounds comprise amino acid; sequences related to a class I HLAP alphal domain (positions 79-84). They can be used to inhibit cyctoxic T-lymphocytes (CTL) from undesirably attacking cells in a host or in vitro. They can also be used in combination with antigenic peptides or proteins of interest to activate CTLs. They can also inhibit the profleration of relativate CTLs. They can also inhibit the cyclosic used for preventing rejection of transplants or for treating autoimmune diseases, e.g. diabetes, rheumatoid arthritis and lupus errythematosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ä
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Example 15; Page 36; 80pp; English.

R83061-R83085, R83090-R83096 and R92907-R92914 represent fragments of class I major histocompatibility complex (MRC) antigens. This sequence is an inverted dimer of residues 75-84 of the alpha-1 domain of the class I MHC HLA-B2702. These sequences can be used to extend the period of acceptance by a recipient of a transplant from an MHC unmatched donor. The peptides are administered to a patient in conjunction with a subtherapeutic amount of an immunosuppressant. This is administered to the patient for a limited period of time (compared to the lifetime modulate for almited period of time (compared to the lifetime modulate (or inibit) the activity of the cytotoxic T lymphocytes (CTLs) of the patient.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                16-MAY-1996 (first entry)
HIA-B2702 CTL modulating peptide (B2702.84-75/75-84).
Cytotoxic T lymphocyte; CTL; major histocompatibility complex; MHC; immunosuppressant; graft versus host disorder; transplantation; therapy; class I MHC; HIA-B2702.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps

treating autoimmune diseases

Claim 16; Page 35; 41pp; English.

This sequence represents a specifically claimed immunomodulating
dimer peptide of the invention. A peptide-type compound or variant is
claimed which has immunomodulating activity, including the N-terminal
acylated and/or C-terminal amidated or esterified forms of up to 60.

Claimed which has immunomodulating activity, including the N-terminal
acylated and/or C-terminal amidated or esterified forms of up to 60.

Claimed which has immunomodulating activity, including the N-terminal
activity including the N-terminal
activity including the N-terminal as 10.

Vi and 7 = D, Sor N; and 9 = R or (a) and 8 = T or N; and 8 = E or N;
vi and 7 = D, Sor N; and) = R or G; and 0 = I or N; and 2 = R or C;
vi and 7 = D, Sor N; and 9 = R or G; and 0 = I or N; and 3 = G or R; and a represents amino acid. The sequence in the brackets may optionally be absent or truncated at any peptide type bond within the brackets. The compounds comprise amino acid sequences related to a class I HLA-B alphal domain (positions 79-84). They can be used to inhibit the compounds of interest to activate cTLS. They can also be used in combination with antigenic peptides or proteins of interest to activate cTLS. They can also inhibit the used for producing of transplants or for treating autoimmune diseases, e.g. diabetes, rheumatoid atthritts and lupus erythematosis.

The products can also be used for detection and diagnosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1 YRLAI -----XRIALRY 12

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Example 15; Page 36; 80pp; English.
R83061-R83085, R83090-R83096 and R92207-R92913 represent fragments of class I major histocompatibility complex (MHC) antigens. This sequence is an inverted dimer of residues 75-84 of the alpha-1 domain of the class I MHC HIA-B2702. These sequences can be used to extend the period of acceptance by a recipient of a transplant from an MHC unmatched donor. The peptides are administered to a patient in conjunction with a subtherapeutic amount of an immunosuppressant. This is administered to the patient for a limited period of time (compared to the lifetime
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       16-MAY-1996 (first entry)
HLA-B2702 CTL modulating peptide (B2702.84-75/75-84(T)).
CYtotoxic T lymphocyte; CTL; major histocompatibility complex; MHC; immosuppressant; graft versus host disorder; transplantation; therapy; class I MHC; HLA-B2702.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     administration for current treatments). The peptides particularly modulate (or inhibit) the activity of the cytotoxic T lymphocytes (CTLs)
                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Extension of acceptance period of transplants from MHC unmatched donor hosts - using Class I B75-84 MHC antigen of the recipient

                                                                                                                                                                                                                                                                                                               Example 15; Page 36; 80pp; English.

R83061-R83085, R83090-R83096 and R92907-R92914 represent fragments of class I major histocompatibility complex (MHC) antigens. This sequence is an inverted dimer of residues 75-84 of the alpha-1 domain of the class I MHC HIA-B2702. These sequences can be used to extend the period of acceptance by a recipient of a transplant from an MHC unmatched donor. The peptides are administered to a patient in conjunction with a subtherapeutic amount of an immunosuppressant. This is administered to the patient for a limited period of time (compared to the lifetime administration for current treatments). The peptides particularly modulate (or inhibit) the activity of the cytotoxic I lymphocytes (CILS)
                                                                                                                  HLA-B2702 CTL modulating peptide (B2702.84-75(T)/75-84).
Cytocoxic T lymphocyte; CTL; major histocompatibility complex; MHC;
immunosuppressant; graft versus host disorder; transplantation; therapy;
class I MHC; HLA-B2702.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New immunomodulating dimer peptide(s) - based on a Class I HLA-B alpha-1 domain, used for preventing rejection of transplants or treating autoimmune diseases.

Example 1, Page 19: 41pp; English.

Peptides W33784-98 and W33778-9 were assayed for their immunomodulating activity. A peptide-type compound or variant is claimed which has immunomodulating activity, including the N-terminal acylated and/or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Immunomodulating dimer; immunosuppressant drug; CTL activation; transplantation; autoimmune disease; Class I HLA-B alpha-1 domain;

the peptide-type compound comprises the formula; A-B, where A, B = (R a876-77), [a479-84] or A-B, where A, B = (R a876-77), [a479-84] or Or V; aa77 = (R a876-77), [a479-84] or Or V; aa77 = (R a876-77), [a479-84] or Or V; aa77 = (A a880 = 1 or N; aa81 = and a represents amino acid. The sequence in the brackets may optionally be absent or truncated at any peptide type bond within the brackets. The compounds comprise amino acid sequences related to a Class I HiA-B alphal domain (positions 79-84). They can be used to inhibit cytotoxic T-lymphocytes (CTL) from undestrably attacking cells in a host or Invitro. They can also be used in combination with antigenic peptides or proteins of interest to activate CTLs. They can also inhibit the proliferation of T cells in response to anti-CD3. The peptide can be used for preventing rejection of transplants or for treating autoimmune diseases, e.g. diabetes, read for detection and diagnosis. The products can also be used for detection and diagnosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        PERION K, Lighberger C, Krensky AM;

WHI: 98-086530/08

New immunomodulating dimer peptide(s) - based on a Class I HLA-B
alpha-1 domain, used for preventing rejection of transplants or
reacting autoimmune diseases

Example 1; Page 19; 41pp; English.

Peptides W33784-98 and W33778-9 were assayed for their immunomodulating
activity. A peptide-type compound or variant is claimed which has
activity. A peptide-type compound cor variant is claimed which has
certerminal amidated or esterified forms of up to 60 amino acids, where
the peptide-type compound comprises the formula; A-B, where A, B = c

C -terminal amidated or esterified forms of up to 60 amino acids, where
the peptide-type compound comprises the formula; A-B, where A, B = c

C small amino acid; aa82 = R or L; aa83 = G or R; and as represents amino
acid sequence in the brackets may optionally be absent or truncated
at any peptide type bond within the brackets. The compounds comprise
amino acid sequences related to a Class I HLA-B alphal domain (positions)
39-84). They can be used to inhibit cytotoxic T-lymphocytes (CTL) from
undesirably attacking cells in a host or in vitro. They can also be
used in combination with antigenic peptides or proteins of interest to
activate CTLs. They are also inhibit the proliferation of T cells in
cesponse to anti-CD3. The peptide can be used for preventing rejection
of transplants or for treating autoimmune diseases, e.g. diabetes,
considered to anti-CD3. The peptide can be used for preventing rejection
of transplants or for treating autoimmune diseases, e.g. diabetes,
considered to anti-CD3. The peptide can be used for preventing rejection
of transplants or for treating autoimmune diseases, e.g. diabetes,
considered to anti-CD3. The peptide can be used for preventing rejection
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               19-JUN-1998 (first entry)
Peptide B2702.84-75/75-84T tested for immunomodulating activity.
Immunomodulating dimer; immunosuppressant drug; CTL activation; transplantation; autoimmune disease; Class I HLA-B alpha-1 domain;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            .;

Example 5: Page 222: 661pp; English.
Double stranded hepatitis GB virus (HGBV) DNA obtd. from HGBV infected tamarin plasma, using standard procedures, was used to prepare a lambda phage HGBV cDNA library. The cDNA clone T00049, which encodes the proteins R81447-50 and R82064/65 (the 6 possible

While of the proteins of the proteins of the may multiply captured to the manufacture and differentiation of CTLS.

Frample: Page 12: 20pp: English.

R95413, and R95415-R9543 represent palindromes and fragments of the manufacture associated antigens. This sequence represents the human-leucocyte-associated antigens. This sequence represents the LHA-B2702 84-757/75-84T palindrome. These sequences can be used to isolate the protein p74 from a T-cell activation in mammalian T-cells. The protein p74 from a T-cell activation in mammalian T-cells and is also immunologically cross reactive with the heat shock protein Escope particularly expressed on B and T cells. p74 can be isolated by lysis of a suitable cell with an amphoteric detergent, and then passed through an efficitly column containing a covalently bound HLA-B2702 palindromic peptide. Compositions comprising the extracellular fragment of p74 combined with HLA-B2702.60-48 (see R95416), induces calcium influx, and inhibits cytocoxic T lymphocyte (CTL) differentiation or cytolysis.

Candidate compounds can be screened for their effect on the cytolysis. Candidate compounds can be employed binding between the candidate compound complexity of T-cells, by combining them with the extracellular portion of p74 and determining the amount of binding between the candidate compound composition containing T-cells and antigen presenting cells (APCS), by sufficient to compete with p74 for the binding of the p74 ligand.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Novel immunomodulatory peptide-type compound - useful for inhibiting
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present sequence is an immunomodulatory peptide, which comprises a Class I HLA-B alpha-1 domain sequence. It can be used in a pharmaceutical composition together with a subtherapeutic dose of an immunosuppressant, to extend the period of acceptance of a transplant from a major histocompatibility complex (MHC) unmatched
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ώ

Mew peptide(s) based on class I HLA antigen domains - used for modulating cytotox1 T-lymphocyte activity towards targets claim 11; Page 54; 61pp; English.

Claim 11; Page 54; 61pp; English.

The peptide is used to modulate cytotoxic T-lymphocyte (CTL) activity, either by inhibition or stimulation. It can be used for inhibiting CTL toxicity in transplantations, for inducing CTL activity in parasitic diseases and neoplasia and in studies on viral infection. The peptide can also be used for identifying CTLs which bind to it and removating subsets of CTLs from T-cell composition. This peptide sequence is more commonly found within larger peptide compounds of not more than 30 amino acids in length.
                                                       Human leukocyte antigen; HLA; peptide; transplantation; neoplasia; parasitic disease; cytotoxic T lymphocyte; modulation.
        15-MAR-1994 (first entry)
Peptide fragment of Class I HLA peptide.
                                                                                                                                                            16-SEP-1993.

                                                                                                                                                                                                                                                  Gaps
donor, i.e. to inhibit transplant rejection. It can also be used in the treatment of autoimmune diseases.

Peptides using the D-form amino acids are more effective immunomodulators than their diastereomers or enantiomers.

Sequence 6 AA:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      19-JUN-1998 (first entry)

Peptide # I used in immunomdulating dimer peptide.

Immunomodulating dimer: immunosuppressant drug; CTL activation; transplantation: autoimmune disease; Class I HLA-B alpha-1 domain;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           WPI; 98-086530/08.
New immunomodulating dimer peptide(s) - based on a Class I HLA-B alpha-1 domain, used for preventing rejection of transplants or treating autoimmune diseases.
                                                                                                                                                                                                                                                     ö

5'-CACGTG-3' AND, WITH HIGHER AFFINITY, TO 5'-CACGCG-3'.
SUBUNIT: EFFICIENT DNA BINDING REQUIRES DIMERIZATION WITH ANOTHER
BHLH PROTEIN. BINDS DNA AS AN HOMODIMER OR A HETERODIMER WITH MAX.
SUBCELLULAR LOCATION: NUCLEAR.
SIMILARITY: BELONGS TO THE BASIC HELIX-LOOP-HELIX (BHLH) FAMILY OF
TRANSCRIPTION FACTORS. BHLH-ZIP SUBFAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         MERONI G., REYMOND A., ALCALAY M., BORSANI G., TANICAMI A.,
